**Pomdevices to exhibit SonambaPro, a novel Remote Health Monitoring system at 2013  
American Telemedicine Association Annual Meeting, August 5-7**

Durham, NC - April 22, 2013 - Pomdevices, LLC will exhibit the latest version of SonambaPro, a Remote Health Monitoring product for home bound patients, at the ATA Annual Meeting in Austin Texas, May 5-7. SonambaPro is packed with vitals recording and well-being monitoring functionality allowing families and caregivers to receive added insight into their loved ones' health in addition to monitoring their medication adherence and activities of daily living.

SonambaPro reminds patients to take vitals readings using industry standard vitals measurement devices such as Bluetooth enabled blood pressure cuffs, weight scales, glucometers and spirometers. SonambaPro then wirelessly captures these vitals readings and makes them available to caregivers for analysis. Thus SonambaPro brings families and caregivers peace of mind and may help reduce hospital re-admittance visits for seniors living independently. And, its affordable price makes it an easy choice for families with seniors that may need more supervised care.

SonambaPro has all the functionality of Sonamba: motion and sound sensors that monitor activity levels in the home, important medication and appointment reminders and social communications like texting and digital photo sharing that help patients and families far away stay in touch. With the additional Home Health Monitoring functionality to Sonamba's long list of already impressive features, SonambaPro is truly an all encompassing device that goes beyond traditional Remote Health monitoring systems – making it a consumer product that appeals to seniors, home bound patients and their caregivers.

The 7-inch touchscreen plug-and-play device is easy-to-use. SonambaPro can be remotely accessed by form a web portal by caregivers or by using our iPhone or Android phone apps by family members or caregivers on-the-go.

SonambaPro will be showcased at the ATA Show in Austin Convention Center, at booth 515.
